## Software and Data Carpentries Working Group

Home Edit Members Documents Tasks Events

To introduce the curriculum and training model of Software and Data Carpentry to ELIXIR, ELIXIR UK launched a pilot Software and Data Carpentry programme for ELIXIR. Throughout 2015 and 2016, the pilot organised a series of five Software and Data Carpentry workshops (UK, Belgium, the Netherlands, Finland and Slovenia) and provided support for additional six training workshops organised by individual ELIXIR Nodes.

In October 2016, a legal agreement was drafted between the ELIXIR Training Platform and the Carpentries to formalise the collaboration. Once agreed, the Training Platform will provide a pan-European Carpentries training programme, spanning two years, supporting those Training Coordinators who want to host an event at their Node. Additionally, there will be a number of Instructor Training events, thereby increasing the training capacity.

The Software and Data Carpentries Working Group was set up in order to facilitate and support this training programme. The Working Group is headed by Celia van Gelder (ELIXIR-NL) and Allegra Via (ELIXIR-IT).

**Goals**

- To provide a maximum of 40 fully-organised workshops (2 for each of the Nodes)
- To provide a maximum of 3 instructor training workshops
- To support TrCs who want to self-organise a Carpentry workshop

**Deliverables**

- Provision of 40 fully-organised Carpentry events across the Nodes
- Expansion of training capacity with 3 Instructor training events

**Group leaders**
